The challenge: Shadow IT is invisible risk

Users adopt cloud apps without IT, and you cannot govern what you cannot see. Discover sanctioned and unsanctioned cloud apps, score their risk with ML, and enforce least-privilege controls across users, devices and services.

Visibility, risk, control

Shadow IT
discovery

ML-based risk
scoring

Action-level
control

1. Cloud application visibility

- Monitor traffic and report sanctioned and unsanctioned apps in a detailed, filterable dashboard.

● Shadow IT discovery

● Usage and action tracking

● Shadow AI governance

2. ML-based risk scoring

- Each app gets a calculated risk score with compliance and security insights.

● Automated data collection

● Compliance insights

● Prioritized remediation

3. Tenant restriction & least privilege

- Allow only enterprise-sanctioned tenants, and block apps lacking MFA, SSO or compliance.

● Tenant restriction

● Action-level control

● Managed and unmanaged devices

See every cloud app. Govern every action.

Discover sanctioned and unsanctioned cloud apps, score their risk with ML, and enforce least-privilege controls across users, devices and services.

Capability area	Includes
Cloud application visibility Monitor traffic and report sanctioned and unsanctioned apps in a detailed, filterable dashboard.	Shadow IT discovery Usage and action tracking Shadow AI governance
ML-based risk scoring Each app gets a calculated risk score with compliance and security insights.	Automated data collection Compliance insights Prioritized remediation
Tenant restriction & least privilege Allow only enterprise-sanctioned tenants, and block apps lacking MFA, SSO or compliance.	Tenant restriction Action-level control Managed and unmanaged devices

THE CHALLENGE

Shadow IT

- ✓ Unsanctioned apps and GenAI services operate outside your control.

Unknown risk

- ✓ Without scoring, you cannot tell which apps are a liability.

Over-privileged access

- ✓ Users hold far more access than they need across SaaS.

Part of one platform

Cloud Access Security Broker (CASB) runs alongside the rest of the SecureTrust Cyber platform, with one console and one policy engine.

Firewall-as-a-Service

Intrusion Prevention System

DNS Security

Secure Web Gateway

Universal Zero Trust Network
Access

Data Loss Prevention

AI Security for End Users

SIEM Platform

Managed Patch Management

Common questions

How is CASB different from SWG?

SWG filters web traffic; CASB governs cloud apps: discover, score risk and control actions inside SaaS.

Does it cover Shadow AI?

Yes. It discovers GenAI services, assesses their risk and enforces granular access controls.
