

SECURETRUST CYBER

AI Security for End Users

Confident AI adoption without losing control

Discover shadow AI, understand AI risk, and enforce policy on prompts, responses, uploads and agent actions.

— The challenge: AI moves faster than governance

Employees adopt AI tools that security cannot see, and sensitive data flows into them.

Shadow AI

Unsanctioned tools, models, copilots and agents operate outside policy.

Data leakage

Users paste confidential data into prompts and uploads.

Unknown risk

AI usage is not connected to business impact or regulation.

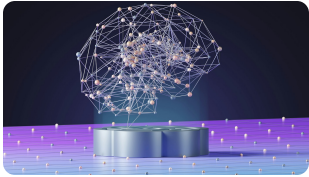

Discover, assess, govern, enforce

- Shadow AI discovery
- Usage-to-user mapping
- Risk scoring in context
- Block and redact controls
- Agent and MCP profiling
- Intent analysis
- GDPR, NIST, OWASP, EU AI Act mapping
- Approved-tool redirection

Part of one platform. AI Security for End Users runs alongside Firewall-as-a-Service, Intrusion Prevention System, DNS Security, Secure Web Gateway, Universal Zero Trust Network Access, Cloud Access Security Broker, Data Loss Prevention, SIEM Platform and Managed Patch Management, with one console and one policy engine.

— Key capabilities

A full AI security lifecycle: see what AI is used, score its risk, and enforce guardrails in real time.

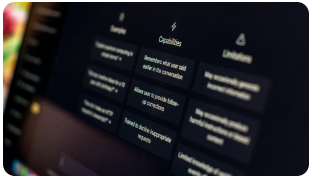

AI app and agent discovery

Inventory sanctioned and unsanctioned AI tools, copilots, models and agents.

Shadow AI discovery

Agent and MCP profiling

Usage-to-user mapping

Prompt & response inspection

Analyze the intent of prompts, responses and actions beyond simple keywords.

Intent analysis

Risk scoring in context

GDPR, NIST, OWASP, EU AI Act mapping

Real-time guardrails

Block or redact sensitive data and redirect users toward approved tools.

Block and redact controls

Approved-tool redirection

Real-time policy enforcement

— Common questions

Does it block legitimate AI use?

No. It redacts or redirects sensitive actions while allowing approved work to continue.

What frameworks does it align to?

GDPR, NIST, OWASP and the EU AI Act.
