

SECURETRUST CYBER

Managed Patch Management

Reduce exposure. Improve patch compliance.

Managed patch operations that combine centralized visibility, automated scheduling, policy control and technician oversight across your endpoints.

— The challenge: Unpatched systems are the easiest way in

Missing and failed patches are the most common, avoidable entry point in breaches.

Patch debt

Updates fall behind and critical vulnerabilities stay open.

Manual toil

Technicians spend hours on updates that should be automated.

No proof

You cannot show auditors that endpoints are actually compliant.

Automation with oversight

- Windows, macOS and Linux
- Maintenance windows
- Real-time status and alerts
- Compliance evidence
- Third-party application patching
- CVE/CVSS prioritization
- On-demand remediation
- Software bundles

Part of one platform. Managed Patch Management runs alongside Firewall-as-a-Service, Intrusion Prevention System, DNS Security, Secure Web Gateway, Universal Zero Trust Network Access, Cloud Access Security Broker, Data Loss Prevention, AI Security for End Users and SIEM Platform, with one console and one policy engine.

— Key capabilities

Automated schedules and policy control, backed by technician oversight and reporting.

Automated schedules

Set patch windows by endpoint, group, customer or policy, with reboot control.

Windows, macOS and Linux

Third-party application patching

Maintenance windows

Risk-based prioritization

Use CVE and CVSS context to focus remediation on what matters most.

CVE/CVSS prioritization

Real-time status and alerts

On-demand remediation

Operational reporting

Prove patch compliance and automate feedback with status and automation reports.

Compliance evidence

Software bundles

Approvals and exclusions

average setup time

— Common questions

Which operating systems are covered?

Windows, macOS and Linux, plus third-party application patching where supported.

Is it fully automated?

Yes, automated schedules and policies handle updates, with technician oversight for exceptions.

How do I prove compliance?

Status visibility and operational reporting provide compliance evidence for review.
