

SECURETRUST CYBER

Firewall-as-a-Service (FWaaS)

Cloud-delivered firewall for every user, site and network

Consolidate branch, data center and LAN firewalls into one cloud-native service that inspects internet, WAN and LAN traffic with application and user context.

— The challenge: Appliance firewalls cannot keep up

Hardware firewalls create blind spots, sprawl and a hardware refresh cycle that never ends.

Appliance sprawl

Every branch and data center runs its own box, each with its own policy and hardware refresh.

Traffic blind spots

Internet, WAN and LAN traffic are inspected inconsistently, leaving gaps attackers exploit.

Lateral movement

Flat internal networks let a breach spread freely once inside.

One firewall, everywhere

- Internet, WAN and LAN coverage
- No protocol blind spots
- Zero-trust access control
- One rule set across sites and clouds
- Application and user awareness
- Per-group and per-host rules
- Device-posture-aware policy
- Elastic cloud processing

Part of one platform. Firewall-as-a-Service runs alongside Intrusion Prevention System, DNS Security, Secure Web Gateway, Universal Zero Trust Network Access, Cloud Access Security Broker, Data Loss Prevention, AI Security for End Users, SIEM Platform and Managed Patch Management, with one console and one policy engine.

— Key capabilities

Replace appliance sprawl with a single cloud-native firewall that scales elastically.

Full traffic inspection

Inspect internet, WAN and LAN traffic without port or protocol blind spots.

Internet, WAN and LAN coverage Application and user awareness No protocol blind spots

Microsegmentation

Restrict access between groups, VLANs, hosts, users, devices and applications to stop lateral movement.

Per-group and per-host rules Zero-trust access control Device-posture-aware policy

Centralized policy

Build rules from identity, device, application, location and context, once, for everywhere.

One rule set across sites and clouds Elastic cloud processing Full admin audit trail

— How it works

01 Discover

Map users, sites, networks, apps and traffic flows.

02 Define

Set centralized firewall, segmentation and access rules.

03 Inspect

Analyze and enforce policy across internet, WAN and LAN traffic.

04 Review

Use logs, alerts, dashboards and audit trails to improve control.

— Common questions

Does FWaaS replace my hardware firewalls?

Yes. It consolidates branch, data center and LAN appliances into one cloud-native service.

Can it inspect encrypted traffic?

Yes, including TLS, subject to deployment configuration and applicable approvals.

How does it scale?

Cloud processing scales capacity elastically, without appliance CPU limits or hardware replacement.
