

SECURETRUST CYBER

SIEM Platform

Security log analysis, vulnerability detection and compliance in one

Aggregate logs from endpoints, network and cloud, detect threats in real time, audit configurations against CIS benchmarks, and prove compliance.

— The challenge: Logs everywhere, insight nowhere

Security data is scattered across tools, and teams cannot connect logs, vulnerabilities and compliance.

Scattered logs

Endpoints, network and cloud each keep their own logs, unconnected.

Silent vulnerabilities

CVEs go unnoticed because inventory is never matched to threat intelligence.

Audit gaps

Compliance evidence lives in spreadsheets, not in the systems being monitored.

Four pillars of security operations

- Comprehensive log collection
- Contextual alerting
- Threat-intelligence correlation
- CIS benchmark auditing
- Decoders and correlation rules
- Endpoint software inventory
- Risk-based prioritization
- Remediation guidance

Part of one platform. SIEM Platform runs alongside Firewall-as-a-Service, Intrusion Prevention System, DNS Security, Secure Web Gateway, Universal Zero Trust Network Access, Cloud Access Security Broker, Data Loss Prevention, AI Security for End Users and Managed Patch Management, with one console and one policy engine.

— Key capabilities

Log analysis, vulnerability detection, configuration assessment and compliance, in one platform.

Security log analysis

Aggregate logs from endpoints, network devices, cloud and apps, and detect anomalies in real time.

Comprehensive log collection

Decoders and correlation rules

Contextual alerting

Vulnerability detection

Collect software inventories, match them against vulnerability databases, and prioritize risk.

Endpoint software inventory

Threat-intelligence correlation

Risk-based prioritization

Configuration & compliance

Audit configurations against CIS benchmarks and map findings to compliance controls.

CIS benchmark auditing

Remediation guidance

Automated compliance reporting

— By the numbers

24/7

real-time threat detection

CIS

benchmark configuration audits

1

unified security + compliance
platform

— Common questions

What does the SIEM collect from?

Endpoints, network devices, cloud workloads and applications, unified into one platform.

Does it do vulnerability management?

Yes. It inventories software, correlates it with vulnerability databases and prioritizes CVEs.

Can it produce compliance evidence?

Yes. It maps findings to specific controls and generates auditor-ready reports.

Talk to an Expert
