

NETWORK SECURITY

Firewall-as-a-Service (FWaaS)

Cloud-delivered firewall for every user, site and network

| [Product Datasheet](#)

[Book a time →](#)

The challenge: Appliance firewalls cannot keep up

Hardware firewalls create blind spots, sprawl and a hardware refresh cycle that never ends. Consolidate branch, data center and LAN firewalls into one cloud-native service that inspects internet, WAN and LAN traffic with application and user context.

One firewall,
everywhere

Internet, WAN
and LAN
coverage

Zero-trust
access control

Elastic cloud
processing

1. Full traffic inspection

- Inspect internet, WAN and LAN traffic without port or protocol blind spots.

● Internet, WAN and LAN coverage

● Application and user awareness

● No protocol blind spots

2. Microsegmentation

- Restrict access between groups, VLANs, hosts, users, devices and applications to stop lateral movement.

● Per-group and per-host rules

● Zero-trust access control

● Device-posture-aware policy

3. Centralized policy

- Build rules from identity, device, application, location and context, once, for everywhere.

● One rule set across sites and clouds

● Elastic cloud processing

● Full admin audit trail

Cloud-delivered firewall for every user, site and network

Consolidate branch, data center and LAN firewalls into one cloud-native service that inspects internet, WAN and LAN traffic with application and user context.

Capability area	Includes
Full traffic inspection Inspect internet, WAN and LAN traffic without port or protocol blind spots.	Internet, WAN and LAN coverage
	Application and user awareness
	No protocol blind spots
Microsegmentation Restrict access between groups, VLANs, hosts, users, devices and applications to stop lateral movement.	Per-group and per-host rules
	Zero-trust access control
	Device-posture-aware policy
Centralized policy Build rules from identity, device, application, location and context, once, for everywhere.	One rule set across sites and clouds
	Elastic cloud processing
	Full admin audit trail

How it works

01 Discover

Map users, sites, networks, apps and traffic flows.

02 Define

Set centralized firewall, segmentation and access rules.

03 Inspect

Analyze and enforce policy across internet, WAN and LAN traffic.

04 Review

Use logs, alerts, dashboards and audit trails to improve control.

THE CHALLENGE

Appliance sprawl

- ✓ Every branch and data center runs its own box, each with its own policy and hardware refresh.

Traffic blind spots

- ✓ Internet, WAN and LAN traffic are inspected inconsistently, leaving gaps attackers exploit.

Lateral movement

- ✓ Flat internal networks let a breach spread freely once inside.

Part of one platform

Firewall-as-a-Service (FWaaS) runs alongside the rest of the SecureTrust Cyber platform, with one console and one policy engine.

Intrusion Prevention System

DNS Security

Secure Web Gateway

Universal Zero Trust Network Access

Cloud Access Security Broker

Data Loss Prevention

AI Security for End Users

SIEM Platform

Managed Patch Management

Common questions

Does FWaaS replace my hardware firewalls?

Yes. It consolidates branch, data center and LAN appliances into one cloud-native service.

Can it inspect encrypted traffic?

Yes, including TLS, subject to deployment configuration and applicable approvals.

How does it scale?

Cloud processing scales capacity elastically, without appliance CPU limits or hardware replacement.

Talk to an Expert

See how Firewall-as-a-Service (FWaaS) fits your environment in a 30-minute conversation with a security expert.
