

Intrusion Prevention System (IPS)

Stop attacks in real time

| [Product Datasheet](#)

[Book a time →](#)

The challenge: Signatures alone miss modern attacks

Evolving threats evade signature-based defenses and hide inside encrypted traffic. Cloud-delivered intrusion prevention that inspects internet, WAN and cloud traffic, including TLS, and blocks malicious activity inline.

Detection beyond
signatures

250+
threat intelligence feeds

TLS
traffic inspected inline

24/7
adaptive protection

1. AI/ML threat detection

- Real-time models detect domain squatting, DGAs, brand impersonation and other evasive threats.

● Domain squatting and DGA detection

● Brand impersonation

● Behavioral analysis

2. Ransomware kill-chain defense

- Block malicious downloads and command-and-control, and detect lateral movement across the WAN.

● Malicious download blocking

● C&C domain blocking

● Lateral-movement detection

3. Virtual patching

- Deploy mitigations for high-risk emerging CVEs while impacted systems are patched.

● Emerging-CVE mitigation

● 250+ threat intelligence feeds

● Global geo-fencing

Stop attacks in real time

Cloud-delivered intrusion prevention that inspects internet, WAN and cloud traffic, including TLS, and blocks malicious activity inline.

Capability area	Includes
AI/ML threat detection Real-time models detect domain squatting, DGAs, brand impersonation and other evasive threats.	Domain squatting and DGA detection
	Brand impersonation
	Behavioral analysis
Ransomware kill-chain defense Block malicious downloads and command-and-control, and detect lateral movement across the WAN.	Malicious download blocking
	C&C domain blocking
	Lateral-movement detection
Virtual patching Deploy mitigations for high-risk emerging CVEs while impacted systems are patched.	Emerging-CVE mitigation
	250+ threat intelligence feeds
	Global geo-fencing

THE CHALLENGE

Evasive threats

- ✓ Domain squatting, DGAs and brand impersonation slip past static signatures.

Encrypted traffic

- ✓ TLS hides attacks from appliances that cannot inspect it.

Emerging CVEs

- ✓ Exploits land before systems can be patched.

Part of one platform

Intrusion Prevention System (IPS) runs alongside the rest of the SecureTrust Cyber platform, with one console and one policy engine.

Common questions

How does it go beyond signatures?

AI/ML models, purpose-built heuristics and aggregated threat intelligence detect evasive and emerging attacks.

Can it protect systems while they are being patched?

Yes. Virtual patching deploys mitigations for high-risk CVEs before systems are updated.

Does it work for remote users and cloud?

Yes. It inspects branch, cloud and remote-user traffic without appliance sizing limits.

Talk to an Expert

See how Intrusion Prevention System (IPS) fits your environment in a 30-minute conversation with a security expert.
