Patch Management for Security Leaders

Missing and failed patches are the most common, avoidable entry point in breaches. Unpatched systems are the easiest way in. SecureTrust Cyber combines centralized visibility, automated scheduling, policy control and technician oversight across your endpoints.

Automation with
oversight,
measured

24hr
patching cycle

99%+
patch success rate

90%
reduction in manual
patching

5 min
average setup time

1. Close patch debt with automated schedules

- We run a 24-hour patching cycle, so updates are deployed on a daily cadence.
- Set patch windows by endpoint, group, customer or policy, with reboot control.
- Updates stop falling behind, so critical vulnerabilities do not stay open.

● Windows, macOS and Linux

● Third-party application patching

● Maintenance windows

2. End manual toil with risk-based prioritization

- Use CVE and CVSS context to focus remediation on what matters most.
- Technicians stop spending hours on updates that should be automated.

● CVE/CVSS prioritization

● Real-time status and alerts

● On-demand remediation

3. Show auditors the proof with operational reporting

- Prove patch compliance and automate feedback with status and automation reports.
- Demonstrate to auditors that endpoints are actually compliant.

● Compliance evidence

● Software bundles

● Approvals and exclusions

Managed Patch Management

Simplify and Secure Endpoint Patching with Managed Patch Management

Managed patch operations that combine centralized visibility, automated scheduling, policy control and technician oversight across your endpoints. Automated schedules and policy control, backed by technician oversight and reporting.

Capability	Description
24-Hour Patching Cycle	A continuous 24-hour patching cycle keeps endpoints current.
Automated Schedules	Set patch windows by endpoint, group, customer or policy, with reboot control.
Windows, macOS and Linux	Patch operations across Windows, macOS and Linux endpoints.
Third-Party Application Patching	Keep third-party applications current, where supported.
Maintenance Windows	Run updates inside agreed windows to limit disruption to your operations.
CVE/CVSS Prioritization	Use CVE and CVSS context to focus remediation on what matters most.
Real-Time Status and Alerts	Centralized visibility into patch status across your endpoints, with alerts.
On-Demand Remediation	Remediate on demand, outside the regular schedule, when risk calls for it.
Compliance Evidence	Status visibility and operational reporting provide compliance evidence for review.
Software Bundles	Deploy software to endpoints as managed bundles.
Approvals and Exclusions	Control what is patched with approvals and exclusions.

KEY BENEFITS

Automation with oversight

- ✓ **Automated schedules:** patch windows by endpoint, group, customer or policy.
- ✓ **Technician oversight:** exceptions are handled by people, not left to chance.

Risk-based prioritization

- ✓ **Focus:** CVE and CVSS context points remediation at what matters most.
- ✓ **Visibility:** real-time status and alerts across your endpoints.

Operational reporting

- ✓ **Proof:** status and automation reports for compliance evidence.
- ✓ **Feedback:** automate reporting back to the people who need it.

Part of one platform

Managed Patch Management runs alongside the rest of the SecureTrust Cyber platform, with one console and one policy engine.

Firewall-as-a-Service

Intrusion Prevention System

DNS Security

Secure Web Gateway

Universal Zero Trust Network
Access

Cloud Access Security Broker

Data Loss Prevention

AI Security for End Users

SIEM Platform

Common questions

Which operating systems are covered?

Windows, macOS and Linux, plus third-party application patching where supported.

How often are endpoints patched?

SecureTrust Cyber runs a 24-hour patching cycle.

Is it fully automated?

Yes, automated schedules and policies handle updates, with technician oversight for exceptions.

How do I prove compliance?

Status visibility and operational reporting provide compliance evidence for review.
