The challenge: The web is the riskiest surface

Users browse from anywhere, on any device, and every click is a potential compromise. Control web access from the cloud, block malicious destinations and enforce one consistent policy across users, devices and locations.

One web policy,
everywhere

80+
website categories

TLS
inspection

3
policy actions: Allow,
Block or Prompt

1. Malicious-domain blocking

- An always-current blacklist blocks phishing, compromised, malicious and parked sites.

● 80+ website categories

● Always-current blacklist

● Parked and compromised sites

2. Flexible policy actions

- Choose Allow, Block or Prompt, with Safe Search and content restrictions built in.

● Safe Search enforcement

● Per-user and per-device rules

● Custom block and prompt pages

3. Encrypted-session inspection

- Inspect internet traffic, including encrypted sessions, and log normalized events for review.

● TLS inspection

● Searchable event data lake

● Reporting and audit support

Filter the web. Protect every user.

Control web access from the cloud, block malicious destinations and enforce one consistent policy across users, devices and locations.

Capability area	Includes
Malicious-domain blocking An always-current blacklist blocks phishing, compromised, malicious and parked sites.	80+ website categories Always-current blacklist Parked and compromised sites
Flexible policy actions Choose Allow, Block or Prompt, with Safe Search and content restrictions built in.	Safe Search enforcement Per-user and per-device rules Custom block and prompt pages
Encrypted-session inspection Inspect internet traffic, including encrypted sessions, and log normalized events for review.	TLS inspection Searchable event data lake Reporting and audit support

THE CHALLENGE

Web-borne threats

- ✓ Malicious, compromised and phishing sites load before anyone notices.

Inconsistent policy

- ✓ Office, remote and mobile users each get different, weaker controls.

No visibility

- ✓ Without event logging, you cannot see what users actually accessed.

Part of one platform

Secure Web Gateway (SWG) runs alongside the rest of the SecureTrust Cyber platform, with one console and one policy engine.

Firewall-as-a-Service

Intrusion Prevention System

DNS Security

Universal Zero Trust Network Access

Cloud Access Security Broker

Data Loss Prevention

AI Security for End Users

SIEM Platform

Managed Patch Management

Common questions

Does it cover remote workers?

Yes. One policy applies consistently across users, devices and locations, including remote work.

Can users request exceptions?

Yes. Custom prompt pages let users request exceptions that IT approves.

Talk to an Expert

See how Secure Web Gateway (SWG) fits your environment in a 30-minute conversation with a security expert.
